EXECUTIVE SUMMARY

Computer Vision & Deep Learning Specialist focused on autonomous systems, convolutional neural networks, and OpenCV video analytics pipelines. Skilled in high-throughput video processing and model quantization.

TECHNICAL SKILLS

Programming Languages: Python, C++, CUDA, SQL (Basics)

Frameworks: PyTorch, TensorFlow, OpenCV, CUDA, TensorRT

ML AI: Computer Vision, Deep Learning, CNNs, Semantic Segmentation, Lane Tracking, Pose Estimation

Databases: SQLite, Redis

Cloud: Docker, Linux Edge Systems

Tools: Git, CMake, GStreamer, ROS

PROFESSIONAL EXPERIENCE

Computer Vision Engineer — RoboVision Dynamics (*Sep 2022 – Present (2 yrs)*)

- Designed semantic segmentation models in PyTorch for obstacle detection deployed to embedded robotics hardware.
- Implemented C++ and OpenCV multi-threaded video stream decoders achieving 60 FPS under constrained compute budgets.
- Containerized inference environments using Docker for reproducible deployment across edge fleets.

KEY PROJECTS

Autonomous Lane Navigation & Tracking (Tech: Python, PyTorch, OpenCV, Docker)

Built lane detection and steering angle prediction model trained on real-world driving footage with custom temporal smoothing.

Real-Time Facial Landmark & Pose Estimation (Tech: Python, OpenCV, PyTorch, TensorRT)

Optimized 68-point facial landmark regressor running at sub-15ms latency per frame on low-power Jetson hardware.

EDUCATION

B.Tech in Electronics & Computer Science, Georgia Tech (2022)

CERTIFICATIONS

- NVIDIA Certified Deep Learning Developer — NVIDIA Deep Learning Institute (2023)
